Task 6: AWS CLI Operations & Verification

1. List S3 Buckets

- **Purpose:** Lists all Amazon S3 buckets in your account to verify active CLI connectivity and check accessible storage.
-
- **Command:** `aws s3 ls`
-
- **Output:**
-

```
Plaintext
```

```

```

2. Copy a File to S3

- **Purpose:** Uploads a local file (`index.html`) directly into your assigned S3 bucket.
-
- **Command:** `aws s3 cp index.html s3://aws-devops-assignment-dlw10053/`
-
- **Output:**
-

```
Plaintext
```

```

```

3. Create an S3 Bucket (Verification)

- **Purpose:** Attempts to create the assignment S3 bucket. (Note: Because the bucket already exists and is owned by your account, AWS returns an expected notification).
-
- **Command:** `aws s3 mb s3://aws-devops-assignment-dlw10053`
-
- **Output:**
-

```
Plaintext
```

```

```

4. Describe EC2 Instances

- **Purpose:** Retrieves detailed metadata, configuration settings, and operational status for all EC2 instances in your region.
-
- **Command:** `aws ec2 describe-instances`

-
- **Output:**
-

```

```

5. Check S3 Bucket Versioning

- **Purpose:** Queries the specified S3 bucket configuration to verify whether object versioning is enabled for data protection.
-
- **Command:** `aws s3api get-bucket-versioning --bucket aws-devops-assignment-dlw10053`
-
- **Output:**
-

```
